*Escala Collection
Aviation Volume No. 20*

Escala Collection

Our environment is constantly changing. It is saturated with many layers of complexity and curiosity. Observing even the simplest of transformations that nature provides, like the melting of a frozen pond or how leaves collect dew on a brisk autumn morning, is nothing short of miraculous.

The *Escala Collection* offers both micro and macro perspective of everyday elements in our landscape. Through our exploration of how large and small scale meet, we've created designs that emulate ordinary yet treasured natural resources.

WEAVE

The Earth has her own way of creating woven masterpieces, providing not only strength and security but graphic splendor. It is a demonstration of how organic materials can interlace effortlessly to form thick and thin visual lines.

GEOMETRIC

Nature provides some of our most perfect geometric shapes with exact symmetry and optimal functionality. The following patterns are inspired by these dynamic forms, created by a “building and receding” technique often found in our natural surroundings.

ASYMMETRIC

A world view centered on the acceptance of imperfection, or wabi-sabi, is the foundation for an irregular approach to design. The asymmetric aesthetic of these patterns give praise to our environment's beauty and processes.

AERIAL

We are often moved and inspired by how different our natural world's distinguishing patterns appear when viewed from afar. These designs translate, "flora into fabulous" with distinctive lines and contrasting textures creating incredible movement.

LAYERED

When examining slate rock in detail, remarkable surface, depth and pattern is revealed. These masculine designs, rich with layered textures from an undertuft and overtuft construction, exemplify complexity at a micro level.
